

MSA Secures \$9.3 Million Gas Mask Contract from German Military

Mar 24, 2006

PITTSBURGH, March 24 /PRNewswire-FirstCall/ -- MSA (NYSE: MSA) announced today that its European business segment - MSA Europe - has secured a \$9.3 million contract from the German military to supply a new gas mask system for use by German ground, air and naval personnel. The contract covers production of 50,000 masks and related supplies of filters, protective lenses and spare parts.

The gas mask, known as NBC (nuclear, biological and chemical) Protection System M2000, meets new performance specifications developed in cooperation with the German Military Sciences Institute and expert consultants representing the Army, Air Force and Naval branches of the German military.

The M2000 Mask is made of a high-performance rubber compound extremely resistant to chemical warfare agents. Featuring a binocular lens design, the mask provides wearers with a 90 percent or greater field of vision with minimal distortion. Anti-laser and anti-glare protective lens "outserts," which will be furnished under contract, offer added protection from heat flash and solar radiation.

Among the mask's more innovative features is a concealed and patented "safe" drinking tube that allows personnel to replenish fluids without risking exposure to airborne contaminants. The mask also provides four filter connection positions that allow maximum compatibility with various targeting optics, firearms and ordnance systems.

"The M2000 contract represents the culmination of extensive work conducted by our European engineering staff, our global respiratory protection team and safety experts from the German military," said John T. Ryan III, MSA Chairman and CEO. "Developing innovations in respiratory protection has been a core competency of MSA for nearly a century. We're very proud that the German military has entrusted MSA with the important responsibility of helping safeguard its men and women in uniform."

Assembly work for the new respirator system is scheduled to begin this month and will be performed at MSA's manufacturing facility in Berlin.

Established in 1914, MSA is a global leader in the development, manufacture and supply of sophisticated safety products that protect people's health and safety. Sophisticated safety products typically integrate any combination of electronics, mechanical systems and advanced materials to protect users against hazardous or life-threatening situations. The company's comprehensive line of products is used by workers around the world in the fire service, homeland security, construction and other industries, as well as the military. Principal products include self-contained breathing apparatus, gas masks, gas detection instruments, head protection, respirators and thermal imaging cameras. Since the company's founding, MSA products for the military have been used in two world wars, as well as Korea, Vietnam, the Gulf War, Afghanistan and Iraq. The company also provides a broad range of consumer and contractor safety products through retail channels. These products are marketed and sold under the MSA Safety Works brand. MSA has annual sales of more than \$900 million, manufacturing operations throughout the United States and Europe, and more than 30 international locations. Additional information is available on the company's Web site at www.msanet.com.
